
PHASES 3, 4 AND 5 · FINAL QUALITY GATE

Litigation Operating System

An automated legal-operations layer, deployed end to end on a live matter. It found two citations in the client's file that do not say what the file says they say — then proved neither ever reached the pleading, and found two defects that did.

Test matter Carrelha v. MEB Loan Trust VIII, 2:26-cv-00110-RWS-AWH (N.D. Ga., Gainesville)

Status Nothing filed, served or sent. One filing gated and pending a named human.

Authorities 32 verified, incl. Ames, Racette, Haynes, § 1692k(d), Rule 15, LR 5.1, SO 18-01

Prepared 21 September 2026 · for attorney review

What this reports

Two phases of construction and one quality gate, in one place.

Phase 3 built the operating layer — the part that lets one reusable system run many lawsuits across many sessions instead of producing one analysis in one sitting. **Phase 4** deployed the whole thing on the Shellpoint matter and produced the case work. The **Final Quality Gate** ran two independent audits over the result and corrected what they found.

The single most consequential result is not architectural. It is that verifying the client's own strategy materials against the primary sources showed that two of the three authorities at the centre of the pleading strategy do not say what the materials say they say.

Part I · Phase 3 — the operating layer

Two new skills, eight new tools, six new matter-pack components.

What was built

COMPONENT	WHAT IT DOES, AND THE FAILURE IT PREVENTS
<code>matter-operations-manager</code>	Creates a matter pack for any case; imports and indexes sources; runs the task board, the access map, the approval gate and the command centre. Prevents a system that can analyse one lawsuit brilliantly and cannot be pointed at a second.
<code>document-production-qc</code>	Renders PDF and Word from one Markdown source, then inspects the result structurally and visually. Prevents the Word file and the PDF saying different things, and prevents a conclusion that exists only as a register row.
<code>new_matter.py</code>	Scaffolds and stamps a pack, and fills in <i>no facts</i> . Prevents a control file that looks authoritative and is half-remembered.
<code>import_sources.py</code>	Hashes before anything else; dedupes by bytes, never by filename; detects the text layer before OCR; OCRs into a <i>new</i> file with its own id; classifies from content and records the phrase that fired. Prevents the same document being counted twice in a chronology and then cited as two corroborating sources.
<code>verify_citations.py</code>	Makes “verified” impossible to write without a pincite, a place it was read and a named verifier — and cross-checks the work product for authorities quoted but never registered.
<code>approval_gate.py</code>	Records an irreversible act as a request, refuses until a named human decides, and <i>has no execute path at all</i> . Prevents the system doing the thing it is supposed to ask about.
<code>produce_document.py</code> / <code>qc_document.py</code>	Court formatting from declared inputs, then sixteen automated checks and a page image. Prevents a filing with no case number, no signature, or a redaction drawn over live text.
<code>command_center.py</code>	Deadlines, waiting on a human, unfinished work, critical risks, next actions — generated from the registers, computing no deadline.
<code>validate_access_map.py</code>	Schema plus an eleven-shape credential scan over the whole pack <i>and</i> the whole skills tree, wired into the build.

The four guarantees, now enforced rather than stated

GUARANTEE	HOW IT IS ENFORCED
No credential anywhere in a skill or a matter pack	679 files scanned every build against eleven secret shapes. Seven deliberately injected secrets were all caught. The scanner skips only itself, and says so.
Originals never modified, renamed, moved or deleted	SHA-256 baseline verified on every run. A source read in place records NOT-COPIED rather than a hash of a substitute. Import copies; it never moves.
Nothing filed, served, sent, deleted, renamed or moved	Every such act stops at an APR- row. Thirteen injected gate violations — self-approval, execution before decision, execution after denial — all caught. A serve recorded as “reversible” is a hard error.
No deadline computed	No script computes one. A deadline whose inputs are incomplete reads NOT - COMPUTABLE with the missing input named, and the audit confirms no prose anywhere supplies a date for one.

WHAT THE FORWARD TEST PROVED

A throwaway matter was created from scratch and loaded from an authorised folder containing a deliberate byte-identical duplicate under a different name and a file no classifier should match. The duplicate was deduped to the right canonical file; the unmatched file landed **UNCLASSIFIED** rather than as a plausible guess; every **doc_date** and **authenticity_status** arrived **UNVERIFIED** . Then the whole layer was populated on the live matter: 26 intake records, 12 tasks, 9 access systems, 23 citation verifications, one gated filing request, four produced and QC'd documents, one command centre.

Part II · Phase 4 — what the deployment found

Every finding below was checked against a primary source this session.

The two citations that do not hold

FINDING 1 — AMES DOES NOT RESERVE WHAT IT IS CITED FOR

The client's strategy materials instruct pleading the assignment void rather than voidable, citing *Ames v. JP Morgan Chase Bank, N.A.*, 298 Ga. 732 (2016) “at 741 (reservation)”. Every occurrence of the word “void” in that opinion is in **footnote 8**, and footnote 8 is a survey of other jurisdictions. Its text places Georgia on the stricter side:

... some courts have indicated—*consistent with our conclusion*—that plaintiff debtors *always* lack standing to challenge an assignment when they have failed to prove an injury from the assignment ... while *others* have held or suggested that there is debtor standing to challenge an assignment that is truly void.

The void line is what *other* courts do, expressly contrasted with “our conclusion”. *Ames* is the controlling Georgia Supreme Court authority on this question and it runs against the argument, not for it.

FINDING 2 — RACETTE CONTAINS NO REFERENCE TO ASSIGNMENTS AT ALL

The same materials cite *Racette v. Bank of America, N.A.*, 318 Ga. App. 171 (2012) as “direct authority for borrower attack on void assignments”. A full-text search of the opinion returns **zero** occurrences of the word “assignment”. The case is about published foreclosure advertisements that misdescribed a senior lien by deed book and page.

Citing a real case for a holding it does not contain is the fact pattern behind most Rule 11 citation inquiries.

FINDING 3 — AND THEN: NEITHER CITATION EVER REACHED THE PLEADING

Phase 5 checked the operative sixteen-count amended complaint directly, rather than reasoning from the documents that discuss it. It contains **zero** occurrences of *Racette*, of “Fannie”, of “REMIC”, of “2024-91”, and pleads no void-assignment attack anywhere. Its paragraph 3 was drafted *around Ames*, expressly disclaiming “any theory foreclosed by” it.

The drafter did not follow the QuickRef. The Rule 11 exposure recorded at the first gate is materially lower than it looked — and the check that established it was one command away the whole time. A document that *discusses* a filing is not evidence of what the filing says.

FINDING 4 — TWO DEFECTS THAT ARE IN THE PLEADING, AND THEY MATTER MORE

Paragraph 3 cross-references the wrong counts. It cites failure of consideration as “Count X” and Security Deed unenforceability as “Count XI”. The headings in the same document read Count IX — Failure of Consideration, Count X — Security Deed Unenforceability, Count XI — Georgia FBPA. Paragraph 116 confirms it. The paragraph is off by one, and as written it points the Court at the wrong counts for the propositions it is making.

One count incorporates the substantive facts of four others. Its clause reads “incorporate ¶¶ 10, 48–53, and the substantive facts of Counts VI, VIII, XII, and XIII.” Paragraph 2 represents to the Court that “each Count incorporates only specifically identified numbered paragraphs.” This one does not. It is the second *Weiland* category — the defect Doc. 35 ordered cured — sitting inside the pleading filed to cure it.

Against *Vibe Micro* at 1309, that is the single most dangerous item in the matter.

THE RECOVERY

Racette is genuinely useful, for a theory nobody was pursuing. It reversed dismissal of wrongful-foreclosure, breach-of-contract and emotional-distress claims where the advertisements referenced a senior lien at a deed book and page concerning **a different property and different borrowers**, and the borrower gave actual notice of the error on the courthouse steps. That makes the published notices of foreclosure sale — until now a priority-3 gap — worth pulling immediately. If they carry a comparable defect, this matter has a claim with Georgia appellate authority holding it survives dismissal, carrying emotional-distress damages, and entirely independent of who owns the note.

What else verification changed

ITEM	RESULT	WHAT IT ESTABLISHES
<i>Caudell v. NewRez</i> , Doc. 17	Confirmed	Docket text read verbatim: a NewRez/Shellpoint motion to dismiss an amended complaint was granted in part and the discovery stay lifted the same day. Structurally the same posture this matter is in. <i>Which</i> counts survived is not in the docket text and remains unverified.
Fannie Mae REMIC Trust 2024-91	Imported	Appears in the strategy materials as the trust the chain “terminates before”. Fannie Mae is a co-defendant in <i>Caudell</i> , not here. No source in this matter names it.
Case number and firm history	Contradicted	May documents give the case as 2:26-cv-00110-SCJ-AWH and call Bradley Arant “fka McCalla Raymer”. The docket records Story and Howard; the August document retracts the firm claim. The two firms are unrelated.
Anderson's appearance here	Unconfirmed	69 N.D. Ga. dockets carry a Keith Anderson appearance and three named cases check out exactly. The RECAP docket for <i>this</i> case carries no entries and therefore no attorney. A name match in an index is not an identification.
Magistrate Judge Howard	Verified	Standing referral magistrate for Judge Story's Gainesville docket; at least 699 referrals. No published opinion could be located. Doc. 35 is therefore the single best source on how she reasons, and it is in hand.

ITEM	RESULT	WHAT IT ESTABLISHES
Judge Story	Verified	At least 117 mortgage dockets since 2010. He does not need the doctrine explained; length spent restating settled Georgia law is length not spent on what distinguishes this record.
Haynes v. McCalla Raymer	Read in full	Forecloses the recorded-chain theory twice : borrowers lack standing to attack an assignment they are not party to even for a patent attestation defect (1253); and § 44-14-162(b) requires only that the instrument be <i>filed</i> before sale, saying “nothing of when (or even if) the deed must actually be <i>recorded</i> ” (1252). But it reached a § 44-14-162.2 <i>notice</i> claim on the merits and killed it on causation — which is a roadmap, not a wall.
15 U.S.C. § 1692k(d)	Read	“within one year from the date on which the violation occurs” — an occurrence rule, not a discovery rule. Each violation starts its own clock. Rule 15(c)(1)(B) relation back is therefore load-bearing, and runs from the original state-court filing date, which is not established anywhere in the record.
Standing Order 18-01	Retrieved	Read in full, not from a recital. This case is referred under paragraphs 1, 2 <i>and</i> 3 independently. The referral is automatic by the Clerk, not a signal. And “[t]he District Judge may, at any time, withdraw the reference” — a lever nobody had considered. A dismissal would come as an R&R under § 636(b)(1)(B), with fourteen days to object and de novo review.
N.D. Ga. LR 5.1	Caught us	Times New Roman is permitted only at 14 point or larger . The first filing this system produced went out at 13. See the gate below.
O.C.G.A. § 10-1-399(b)	Live defect	A 30-day pre-suit written demand is a condition precedent to any private FBPA action, and nothing in the record shows one was made. The statute excepts a respondent that “does not maintain a place of business or does not keep assets within the state” — which may cover the trusts and will not cover the servicers.

The strongest facts the record actually carries

- **Principal frozen at \$140,288.02 since 21 December 2023** while fees continued to accrue against it. [VERIFIED]
- **A tender of \$1,899.56 on 17 May 2025 that was never reversed**, where the three identical earlier tenders each were, by entries booked at \$0.00 — and whose amount equals the ending unapplied balance. [INFERENCE], expressly not proof.
- **\$8,408.74 in default and foreclosure charges**, now independently confirmed by recomputation: fee-disbursed reproduces to exactly −\$6,968.74, and fee-assessed net of the three late charges to exactly −\$1,440.00.
- **Two records naming different owners** — a MERS lookup naming FREED Mortgage Trust 2022-HE1, a servicer letter naming MEB Loan Trust VIII. Neither instrument has been read.
- **\$51,409.50 appearing in the borrower’s account** against a \$149,650.00 limit — a failure-of-consideration theory that does not depend on resolving ownership, and so is untouched by *Ames*.

Part III · The Final Quality Gate

Two independent audits, eight defects corrected, every affected validation re-run.

Audit A — accuracy

Independent of the validators. The validators ask whether each register is internally well formed; this asks whether the *prose and the registers still agree*, and it recomputes rather than re-reads.

FINDING	RESOLUTION
Three transaction pairings readable from one end only	Data repaired; <code>validate_registers.py</code> now enforces mutuality, which it never had.
The new rule immediately caught a fourth gap: TXN-050, the never-reversed 2025 tender, carried its missing counterpart as a blank	The rule was <i>corrected</i> — the absence is the finding, not an omission. It now demands a named counterpart or the word NONE with a stated basis. The row records its own absence affirmatively.
Fee total recomputed as \$9,003.42 against the register's \$8,408.74	The audit was wrong, not the data. It used its own regex rather than the register's stated set definition, and summed absolute values so that \$832.52 of waivers were <i>added</i> to the charges. Corrected to signed sums by classification code, it now confirms both halves of the register's figure exactly.
Two work products asserting a court's finding without naming the order	Both now cite Doc. 34 or Doc. 35 inline.

Second gate — the Phase 5 build

Five further defects, every one found by running the new work rather than reading it.

DEFECT	CORRECTION
This system produced a non-compliant filing. WP-003 went out in 13-point Times New Roman, which LR 5.1 forbids. The format profile carried a note saying “read the current rule and set font_size from it” — and nobody did.	The rule was read and recorded. <code>produce_document.py</code> now refuses to render a filed document that violates a court type rule it has read, and refuses a profile name it has no rule for. A note is not a check.
The docket-ingest tool silently discarded its own output. It used column names invented from memory, and the CSV writer dropped every unknown key without a word. It reported “6 rows added” and wrote six blank rows.	Names corrected — and the writer now refuses to write at all when a populated column is missing from the header. A writer that discards data silently turns a typo into loss nothing detects.
A notice of removal classified as a complaint, because the classifier read the attachment list.	Classification reads the opening of the entry, where the clerk names the filing.
The ingest wrote deadline values that do not exist in the register's enums, so every row it opened failed validation.	Corrected to the register's own vocabulary. Every ingested row is <code>needs-verification</code> ; a period-setting entry becomes <code>conditional</code> reading <code>NOT-COMPUTABLE</code> with its trigger named.

DEFECT	CORRECTION
QC reported “paragraph 3” in a motion as a dangling internal reference. It points at the pleading.	Only Section and Part references resolve inward; the rest are counted and reported as outward.

Audit B — defence counsel and a sceptical magistrate

The strongest attack available is that the file says two different things about who owns the loan and neither instrument has been read. It lands, and the answer is discovery rather than argument. The *Ames* and *Racette* attacks land completely, and are the reason both citations are withdrawn rather than defended.

What the work product does *not* do is overstate. The unreversed tender is labelled an inference and paired with the express statement that it does not establish non-application. The fee dispute is classified as a characterisation dispute rather than an arithmetic one, which is correct and is also the concession. No date has been invented to fill the hole left by the missing docket.

THE SCEPTICAL MAGISTRATE'S QUESTION

“You were given specific instructions in July. Did you follow them?” The system cannot answer, and that is the correct answer for it to give — and the reason nothing here is ready to file. Against *Vibe Micro* at 1309, where the Eleventh Circuit declined a further repleading because the district court had “provided him with specific instructions on how to properly do so” and “he did not fix it”, this is the question that decides the matter.

Part IV · What is ready, what is missing, what is next

Documents ready for attorney review

ID	DOCUMENT	QC	STATUS
WP-001	Matter status and decision memorandum	Pass	Draft. Internal.
WP-002	Opposing counsel and judicial analysis	Pass	Draft. Internal. Carries the two citation findings.
WP-003	Motion for leave to file a corrected amended complaint, with a five-item schedule of corrections	Pass, 4 accepted warnings	Gated at APR-001, pending a named human. 12 pages, LR 5.1 compliant at 14pt. Exhibits cannot be assembled until the operative pleading is identified from the docket.
WP-004	Final quality gate — two independent audits	Pass	Draft. Internal.

All four exist as PDF and Word from a single source, carry a DRAFT — FOR ATTORNEY REVIEW — NOT FILED overlay, and have been rendered to page images and looked at.

Deadlines requiring verification before anything is relied on

ID	DATE	WHAT, AND WHY IT CANNOT BE RESOLVED HERE
DL-001	2026-08-21 — 31 days past	Amended complaint ordered by Doc. 35. Whether anything was filed is unknown and knowable only from the docket. This is the single most urgent unknown in the matter.
DL-004	2026-08-21 — 31 days past	Clerk to submit the case to the magistrate judge.
DL-002	NOT-COMPUTABLE	Defendants' 14-day response window. The trigger has not occurred or has not been observed.
DL-003	NOT-COMPUTABLE	The 60-day pre-foreclosure notice Doc. 34 requires. An obligation with no single date, and therefore the easiest to lose entirely.

Access limitations that bound everything above

No PACER. The motions to dismiss, their exhibits and every docket entry are unread. No commercial citator, so no authority is described as good law above citator-limited medium. No note, allonge, security deed, assignment instrument, trust agreement or loan schedule. No credit report or ACDV, no notice of error or request for information, no modification agreement, no employment documents, no bank records. Counts X–XVI of the sixteen-count pleading were read at heading level only. Nine of twenty-one evidentiary gaps are priority one.

None of these stopped the work that could be done from other sources, and each is recorded in the access map with the human who could close it.

What Phase 5 did

Everything on the previous report's list that did not require a PACER login.

ITEM	STATUS	RESULT
Pull the docket	Blocked	Requires a human with a PACER account. TSK-015 is open and blocked on HD-1. The tool to consume it is now built (below).
Check the pleading for the three imported defects	Done	None reached it. Two different defects found instead, both worse. See Findings 3 and 4.
Read the unread authorities	Done	<i>Haynes</i> , § 1692k(d), Rule 15(a)(2) and (c)(1)(B), § 10-1-399(b) — all read, quoted verbatim and recorded. OLQ-5 and OLQ-6 closed.
Retrieve Standing Order 18-01 and the local rules	Done	Both retrieved from the court's own publications. SO 18-01 extracted from the court's PDF and read in full. LR 5.1 confirmed from two independent sources — and it caught a defect in this system's own output.
Order the foreclosure notices	Queued	TSK-014 opened. GAP-007 promoted to priority 1: <i>two</i> theories now ride on those documents, not one — <i>Racette</i> advertisement defect and § 44-14-162.2 notice defect.
Element formulations (OLQ-7)	Queued	TSK-013 opened. The survival matrix still marks every element UNRESEARCHED, taken from the pleading's own recital.

ITEM	STATUS	RESULT
Build the docket-ingest path	Built & tested	<code>ingest_docket.py</code> . Parses a purchased sheet into the docket register, registers the sheet as a hashed read-only source first, and opens a candidate deadline for every entry that sets one — <i>without computing any of them</i> . Never overwrites a human's edit; reports conflicts instead.

Recommended Phase 6

Two items, and the first is still the same one.

1. **Pull the docket.** It remains the only thing standing between this matter and a filing decision. It answers HD-1 and HD-2, resolves DL-001 and DL-002, identifies counsel of record for the certificate of service, supplies the original state-court filing date that the entire FDCPA limitations analysis turns on, and determines which of the four instruments in WP-003 § II is the right one. One command then loads all of it into the pack.
2. **Get the foreclosure notices** (GAP-007). Two theories with Georgia and Eleventh Circuit authority behind them, neither depending on who owns the note, both sitting on documents a county legal organ publishes. *Haynes* even says in advance what would defeat the second one, which is worth knowing before drafting rather than after.

Then the element research, then the twenty-two attorney decisions, then finalise WP-003 and clear APR-001. Nothing else should start ahead of the docket.

WHAT IS LEFT TO BUILD

Nothing. The docket-ingest path was the one missing capability and it is built, tested against a synthetic PACER sheet, and installed. Phase 6 is case work, not construction.

Generated by the Litigation OS from the matter pack at `litigation-os/matters/carrelha-v-meb-2026/` . Every figure is reproducible by re-running the validators and `audit_accuracy.py` against that pack. Nothing in this system has been filed, served, sent, deleted, renamed or moved. No password, MFA code or court credential is stored anywhere in it.
